BioAssetPro — finance confirmation sheet

Your books will be set up on the chart of accounts in your own posting-engine workbook (*YIFRE_Posting_Engine_Final_Implementation_Ready_01102026.xlsx*) — 137 five-digit accounts, with its 57 cost centres. The system starts empty: no balances are carried over, so there is no crosswalk to approve.

Your posting engine answered almost everything. These five are what it did not, each with what we built and why. Tick *agreed* to keep it, or tick *change it* and say what you want instead. Nothing here stops your staff using the system — it decides which account a posting lands in.

What we still need you to decide

1. Impairment loss on equipment

As built: 52800 Impairment loss — property, plant and equipment, an account we added. Your workbook has no fixed-asset impairment account: 51200 is inventory write-down and 52400 is depreciation.

☐ agreed

Or: Name a different account

☐ change it

2. Variance capitalised into finished goods and work in progress

As built: 12490 and **13190**, two asset accounts we added, so the variance can be reviewed at period end. **Please look at this one closely:** your workbook maps every variance to the profit and loss — 53000 material price, 53500 recovery and WIP, 53600 feed yield — and carries no asset-side variance account at all.

☐ agreed

Or: Expense the variance as your workbook does, and drop the two accounts

☐ change it

3. Which livestock stages count as immature

As built: Poultry immature: Chick, Grower, Pullet, Cockerel. Snail immature: Egg, Hatchling, Juvenile, Grower. Everything else mature. **A note on this:** your workbook says the posting group is assigned on each breed or stage record (“assign to the relevant master record”), which would let your staff set it. The system currently decides it in code.

☐ agreed

Or: Correct the lists, or ask us to make it a field your staff set

☐ change it

4. Who may approve what, by value

As built: Farm Manager to ₦250,000 · Finance Manager to ₦2,000,000 · Finance Controller to ₦10,000,000 · MD/CEO above that. These are the consultant’s illustrative figures, never confirmed by anyone.

☐ agreed

Or: Set your own limits

☐ change it

5. Death rate that needs an abnormal-mortality approval

As built: 2% of the population, also provisional.

☐ agreed

Or: Set your own rate

☐ change it

Settled by your own workbook — nothing needed

Eggs held in incubation → 13020 · your FARM_WIP and WIP_CONTROL both map there
Material consumed in processing → 12000 · your SOURCE_INVENTORY and INVENTORY_CONTROL
Finished feed → 12450 · your FINISHED_FEED_INVENTORY
Farm feed issues → 12100 · your FARM_FEED_INVENTORY
Recovery variance → 53500 · your RECOVERY_VARIANCE
Income tax → 58000 against 20900 · your INCOME_TAX_PAYABLE, and the only tax expense account in your chart

Anything to change — write the number and what it should be:

Confirmed by _____ Role _____ Date _____

Return this sheet and the choices are applied before go-live. Where a choice changes an account, the change is recorded against your name in the system’s audit trail.
